

NPT and BSP Threads

Spartan Peripheral Devices manufactures valve bodies for the North American market in NPT threads and ANSI flanges. For our European and Middle East clients we use BSP threads and DIN flanges. We have often been asked to explain the difference between NPT and BSP threads, not a simple task. We have found some clear, concise information and would like to share it with you. Please [click here](#) to access our website where we have posted two short articles on this subject.
